

the name of the dataset you are using: “penguins.csv”

the columns you will be working with:

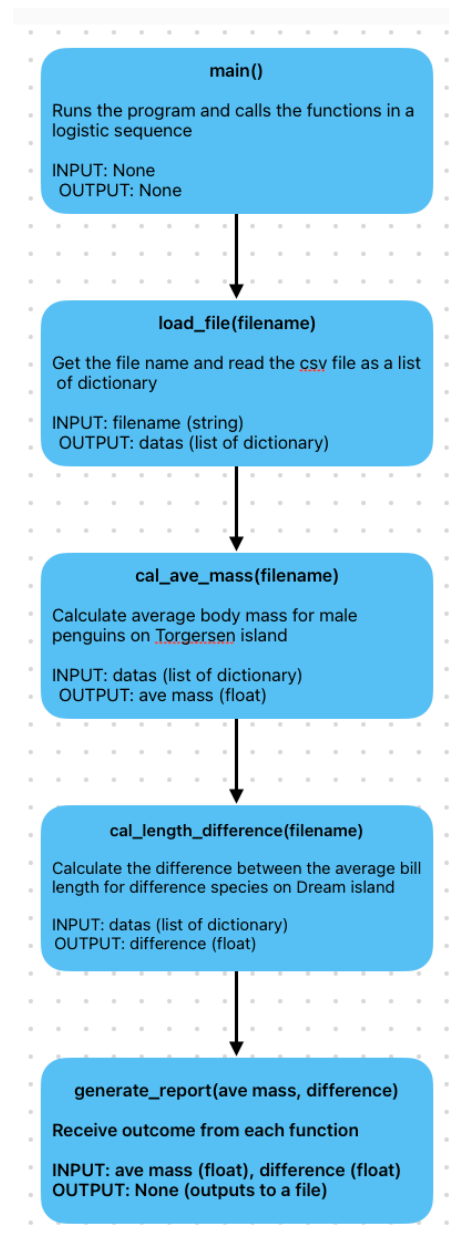

island, body_mass_g, sex, bill_length_mm

the calculations you will be performing:

What is the average body mass for male penguins on Torgersen island?

What is the difference between the average bill length for difference species on Dream island?

the function decomposition diagram:

the names of collaborators (if any): Gen AI to debug
